Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6-9, 12-18, 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bastyr in view of Taylor.

Bastyr discloses in figures 1-4B shoulder orthosis comprising a lower arm section 64, a drive member (54, 56), a lower cuff 36, hand cuff 42, the drive mechanism is rotated manually and rotates the lower arm section from different positions, an upper arm section (the flat rectangular shaped portion connected into 54, in fig. 3), that is adjustable, a base section 48, a second drive means 72. However, for the sake of argument, Taylor teaches in figures 1-4 s shoulder orthosis comprising a first drive mechanism 20 and a second drive mechanism 30. It would have ordinary skill in the art at the time that the invention was made that the first and second drive mechanism as taught by Taylor could be substituted for the drive mechanisms disclosed by Bastyr because the four drive mechanism are interchangeable.

Claims 4-5, 10-11 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over the references as applied to claims above, and further in view of Schween.

Art Unit: 3764

Schween teaches in figure 3 a shoulder orthosis comprising an arm section having an outer 141 and an inner 161 channel members. It would have been obvious to one having ordinary skill in the art at the time that the invention was made that the inner and outer channel members as taught by Schween could be incorporated into the lower arm section disclosed by Bastry in order to be able to adjust the length of the lower arm section.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Longfellow and Bonutti '562, each discloses a shoulder orthosis.
